table a5.07: critical values for the wilcoxon/mann-whitney ... - u_{obt} is the lesser of the two calculated test statistics (u_1 & u_2). if $u_{obt} \leq u_{crit}$, reject H_0 . dashes (-) indicate that the sample size is too small to reject the null hypothesis at the chosen α level. if $n > 20$ this table cannot be used. a p can be computed for u_{obt} , using the normal distribution approximation: $z = \frac{u - \frac{n(n+1)}{4}}{\sqrt{\frac{n(n+1)(2n+1)}{24}}}$... **operators manual - tractor supply company** - operator's manual automatic lawn tractor — model series 760 form no. 769-05684 (december 11, 2009) customer support please do not return the machine to the retailer or dealer without first contacting our customer support department. **statistics: 2.3 the mann-whitney u test** - $y = n \times n_y$. 5. calculate $u = \min(u_x, u_y)$ 6. use statistical tables for the mann-whitney u test to find the probability of observing a value of u or lower. if the test is one-sided, this is your p -value; if the test is a two-sided test, double this probability to obtain the p -value. note: if the number of observations is such that $n \times n$ **critical values of the mann-whitney u (two-tailed testing)** - critical values of the mann-whitney u (two-tailed testing) $n_1 \ n_2$
